Question:

What are the key skills and competencies that project managers will need to thrive in the future of work, and how can they acquire or develop these skills?

Answer:

The key skills and competencies that project managers will need to thrive in the future of work are Emotional Intelligence (including) Ethical Consideration, Ethical Decision Making and Empathy Adaptability & Change Management Collaboration & Team Work Communications Skills ESG (Environmental, Social and Governance), Fair Procurement Practices, Social Responsibility and Sustainable Practices Digital Literacy Data Analytics Project Managers need to keep abreast of their local and global environments, the strategic direction of their organisations and the global imperatives, identify the gaps of where their skills are and tap into PMI (and similar professional bodies) resources, continue connecting with their professional networks, learning and training, challenging themselves, acquiring mentors and volunteering so as the lifelong journey of learning continues.

Question:

In the future, which roles in project teams could be most impacted by emerging technologies?

Answer:

This largely depends on the industry, however, I see the PM role maturing in a more crystallised Project CEO, where methods, approaches, tools and information analysis, including predictive analysis and what if scenarios will be at their fingertips enabling the PM to manage more complex projects increasing the likelihood of success. The challenge for the PMs would be to exercise their own judgement rather than accept technologies at face value, be careful judging AI recommendations, decipher facts from fiction, be wary of bias - conscious and unconscious ensuring ethical decision making as the reliance on technology increases.

Africa

Joanna Agyepong Agyare

Question:

What are the key skills and competencies that project managers will need to thrive in the future of work, and how can they acquire or develop these skills?

Answer:

Thriving in a world where the nature of work is constantly changing requires adaptability and resilience - the ability to bend under pressure and uncertainty without breaking and losing focus. Aside from these two, empathy, emotional intelligence, communication skills, entrepreneurial mindset, team leadership, and collaboration are very important power skills needed to thrive in the future of work. PMs should leverage their current roles as safe spaces to acquire and refine these power skills. To be resilient, PMs should develop a positive attitude to failure and setbacks to enable them to recover quickly and move on. Adaptability requires having an open mindset toward new situations and consciously tuning yourself to adapt to them.

Question:

In the future, which roles in project teams could be most impacted by emerging technologies?

Answer:

Emerging technologies are likely to impact almost all aspects of project work. However, the roles that are likely to be most impacted are the ones involving repetitive tasks and these could include Project Reporting, Scheduling, Resource Allocation, Cost Planning, and lessons learned

Europe

Yolanda Cabrera-Sybesma

Question:

What are the key skills and competencies that project managers will need to thrive in the future of work, and how can they acquire or develop these skills?

Answer:

Core skill that is strongly being looked at among managers is entrepreneurial skills (think outside the box philosophy, creative drive to look at a business beyond the scope of your role as a manager)...other skills include adaptability, change management, digital literacy, data analysis and communication skills along with empathy and emotional intelligence are key competencies that pm's need. 2. Routine and repetitive tasks within project teams are likely to be impacted the most by emerging technologies. roles that involve data entry, basic analysis are becoming automated. However, leadership roles are here to stay, they will remain & human-driven.

Question:

In the future, which roles in project teams could be most impacted by emerging technologies?

Answer:

Roles that involve data entry will become automated. ie. data entry specialist, data manager.

Nadun Gomes
Asia

Question:

What are the key skills and competencies that project managers will need to thrive in the future of work, and how can they acquire or develop these skills?

Answer:

Soft skills such as Collaboration, Leadership, Problem Solving, Conflict Management, Communication, and Adaptability will become core for the success of any project. It is vital to be proactively organized and plan while assessing, mitigating the present risk, and predicting the future possible risks to be on schedule and meeting budget. Project Managers should use historical data and lessons learned when planning new projects, and scoping which is, vital to integrate with technology for easy execution and greater visibility. Professional education in the Project Management discipline (PMP), continued training, and self-assessments will enable project managers to be futuristic and lead effectively and efficiently.

Question:

In the future, which roles in project teams could be most impacted by emerging technologies?

Answer:

New technology integrated with Project Management will impact each role in the project team on a different scale. The role of the Project Sponsor and the Project Manager will have an impact at the most. Project Sponsors will no longer depend on the project reports shared by the Project manager, rather will navigate through interactive Dash Boards to deep dive into projects. The AI-based technology will support project sponsors to assess project status and take corrective actions before a project is derailed. The project Manager will be deemed to use technology to automate most of the administrative work which doesn't require human intervention in decision making. It will be a necessity for Project managers to be familiar with Apps and tools as part of their hard skills.

the Xchange effect

A Virtual Journey of Cross-Country Collaboration and Co-Creation

Chapter Xchange

What is the Xchange Effect? The Xchange Effect is a phenomenon where diverse perspectives across countries, specialties, and cultures lead to innovative solutions.

March 2020 was a moment that the world couldn't, precisely at a time of the pandemic the world had no time to stop, suddenly everything changed. Everything that we learned about interactions and networking suddenly took on another dimension. And the world of the Project Management Institute's local chapters' meeting suddenly became landscapes.

An "social distancing" between the same "face-to-face meetings, the spirit of local PMI Chapters network globally, translated to the virtual world. The chapters members' engagement became crucial. Almost every chapter is looking for ways to improve members' engagement.

Everywhere, except for a fledgling initiative coming from the PMI Chapter in Mumbai, India. The PMI Chapter Xchange is experiencing record growth in terms of members' engagement from all over the world.

In this book you learn:

- The genesis of the PMI Chapter Xchange
- How the Xchange started and how it evolved
- How the Power of the Xchange model
- The Xchange and the Engagement Model
- The future of the Xchange

A truly collaborative work from the following authors & chapter leaders:
